

Integrating Mazévo with your SIS is as easy as 1. 2. 3.

Mazévo is a single integrated source of facility scheduling information for your entire campus

A Turnkey Solution

In today's "new normal" of reduced IT budgets and limited resources, you need to do more with less than ever before. Building out integrations between your SIS and yet another software application with expensive software and highly skilled programmers is a non-starter for most university IT departments. With the Mazévo integration platform you can:

- Share course information securely between your SIS and Mazévo
- Eliminate custom software development
- Reduce complexity and need for specialized technical resources
- Focus on supporting your institutions mission

How It Works

Mazévo's SIS Integration Platform is powered by N2N Illuminate and works with leading SIS systems such as Ellucian Banner, Ellucian Colleague, Ellucian Powercampus, Anthology Student, PeopleSoft, Jenzabar, and Workday

1. Configure the N2N Illuminate IPAAS to connect your SIS to Mazévo
2. Import your classrooms into Mazévo
3. Synchronize courses between Mazévo and your SIS

Why Mazévo

Mazévo is a modern SaaS facility scheduling system for courses and events on your campus. It's two-way integration with your student information system (SIS) means you have a complete picture of when classes and events are scheduled without having to track down information in multiple systems. Mazévo's SIS Integration Platform minimizes your expense of managing and maintaining the integration between your student information system and Mazévo

About the Platform

The Mazévo's SIS Integration Platform, powered by N2N illuminate provides a unified, bi-directional integration with your SIS. N2N has helped hundreds of higher education institutions for more than a decade resolve a wide variety of integration challenges with a streamlined cost-effective framework. This platform provides secure and holistic cloud solution so that your institution can seamlessly connect Mazévo with your student information system About the Platform
